

AML-550AIC

The automated sewing unit for elastic waistband.

- It is an automated unit for elastic waistband rings includes logo.
- Automatic measurement and cutting of the material length by the position of the logo which was possible only by manual operation in the past.
- This unit is equipped with a high-sensitivity Pattern Matching Sensor, there is no troublesome setting like the existing CCD camera method, which simplifies the setup by operator.
- Since the material surface is set on the bottom side and the sensor is readable from the bottom side, the material becomes a ring shape and the material surface becomes the top surface when sewing. Therefore, possible to sew the ring in the correct direction and can be used rings directly in the next operation of waistband machines.
